

Project location: Germany  
Year: From 2009

### The Challenge

Several German military facilities required the integration of a heterogeneous security environment into a unified management system. Very complex access and control rights depending on system statuses, working hours, attendances etc. had to be considered. WinGuard is providing a comprehensive solution by consolidation of the existing systems in one overall platform. Specific rights management for multiple users, customizable reporting and quick response times for various situations are key factors for creating a reliable and easy to use system.

### Integration

- Autec – Access control
- Commend – Intercom
- Dallmeier – Video technology
- Deister – Key management
- Siemens – Fire alarm, Intrusion detection, CCTV
- Standard protocols – ModbusIP, ICMP, SNMP
- Stentofon – Intercom
- Telenot – Alarm receiving center

### Benefit

- Display of all relevant information in real time
- System encompassing automatic interaction
- Easy to operate
- Dynamic workflows for various situations
- Centralized data management and archiving
